

SPOTLESS^{hc}

Clean it Once and Be Done™

**The spray-on,
leave-on, no-flush
pre-treatment for
hydrocarbon systems.**

No-Flush Pre-Treatment, Leveling Agent & Cleaning Booster for Use in Hydrocarbon Systems

SPOTLess hc® is an effective pre-treatment designed to enhance stain removal and cleaning performance in high flash hydrocarbon (HFHC) and traditional petroleum systems.

SPOTLess hc is designed as a no-flush pre-treatment; simply spray it on the garments and clean them in your machine without flushing on the board. SPOTLess hc rinses stains out easily in the wheel without harming your system.

When used as a no-flush pre-treatment, SPOTLess hc also works as a cleaning booster, improving the stain removal and soil suspension capabilities of your cleaning system on the whole load, not just the garments to which it is applied.

• *Pre-Treat For Easy Soil Removal*

SPOTLess hc makes removal of stains like oily foods, cosmetics, and cuff and collar grime easy. Simply spray or brush SPOTLess hc on stains, allow to penetrate, then dryclean as normal. There is no need for time-consuming flushing and drying on the board.

• *Reduces Recleans*

Recleans are costly to your workflow, your productivity, and your profits. To reduce recleans, apply SPOTLess hc on soiled areas before cleaning and get clothes cleaner the first time.

• *Boosts System Cleaning Power*

When used as a no-flush pre-treatment, SPOTLess hc works as a cleaning booster, improving the stain removal and soil suspension capabilities of your cleaning system. Regular use of SPOTLess hc will aid in cleaning the whole load, not just the garments to which it is applied.

• *Prevents Spotting Rings*

SPOTLess hc controls water. When wet-side stain removal techniques are needed, SPOTLess hc can be used to level the area and help prevent spotting rings or damage to the fabric from residual moisture. It can also prevent redeposition of soils back onto the clothes.

• *Versatile Uses*

SPOTLess hc can be sprayed, brushed on, applied with a spotting bottle, or added to the wheel as a batch additive for extremely soiled loads.

• *Safe on Delicate Fabrics*

SPOTLess hc is safe to most fabrics and colors. It is ideal for users of all skill levels.

Instructions for Using SPOTLess hc®

SPOTLess hc aids in the removal of many unidentified & combination stains including:

***Oily Foods
Cosmetics
Inks
Embedded Soil
& Grime
Unknown Stains***

SPOTLess hc is safe to most fabrics and colors. If colorfastness is questionable, test garment in a hidden area.

Pre-Treat Soiled Areas. Simply Spray, Wait a Few Minutes, Then Clean

1. Use the 32 oz. SPOTLess hc spray bottle to apply full strength. Do not dilute. Completely saturate the area needing treatment.
2. Areas of heavy soils such as hemlines and around pockets may require tamping.
3. Allow SPOTLess hc several minutes to work.
4. Do not flush. Dryclean as normal.

Use at the Spotting Board to Remove Stains

1. Apply SPOTLess hc directly to the fabric and completely saturate stained area.
2. Work the stain gently with spatula or by lightly tamping with a dry-side brush.
3. When soil is loosened or removed from fabric, continue with the drycleaning process. SPOTLess hc is designed to remain on the fabric prior to drycleaning, so that you can machine-rinse spotted garments. Therefore, do not flush, rinse or dry prior to drycleaning.

Control Moisture During Drycleaning (Leveling)

The problems caused by drycleaning fabrics that contain moisture from pre-spotting can be overcome by using SPOTLess hc. Using a technique called leveling, it works by controlling the moisture that remains from wet-side stain removal procedures after the spotted area has been rinsed and air-dried with the spotting gun.

1. After using any wet-side stain removal agent AND after fabric has been rinsed and air-dried with the spotting gun, apply SPOTLess hc liberally to the pre-spotted areas. This will control moisture that may remain in the fabric.
2. Lightly tamp the wet area, including fabric area just outside of ring. Do not flush, rinse or dry.
3. Dryclean as normal.

Add An Extra Boost to Heavily Soiled Loads (Batch Method)

For extra cleaning power for loads of heavily soiled garments, add SPOTLESS hc at a rate of 3 to 6 oz. per 10 lbs.(196 to 177 mL per 10kg), depending on the degree of soil.

Note: For additional water-soluble soil removal, combine 5 parts SPOTLess hc with 1 part water. Use as directed above. Do not add water to loads containing soft wools or cashmere.

How to Order SPOTLess hc

SPOTLess hc is sold by authorized Street's distributors everywhere. Order SPOTLess hc from your local distributor in single one-gallon (3.785 L) containers or in cases of four.

Specially labeled spotting and spray bottles are available from your distributor.

For professional drycleaning use only. Before using any chemical product, review the Safety Data Sheet (SDS) for safe handling and proper disposal.
