

Laidlaw OVATION™

Combination One Shot, Enzyme Powder Laundry Detergent

Formulated for quality cleaning performance, **OVATION** is an innovative, one shot, mildly built powder laundry detergent that combines a color-safe oxygen bleach, a low temperature bleach catalyst, degreasers and dispersing agents; with a select choice of enzymes for enhanced stain removal.

OVATION is the powder product of choice for launderers wishing to process mixed color and soil classes in limited operation times with less than optimum hot water temperatures. **OVATION:**

- Contains a select choice of enzymes that provide effective removal of body oils, food stains, blood, albumen and other bodily secretions
- Utilizes a color safe oxygen bleaching component in conjunction with a low temperature bleaching catalyst effective in hot water temperatures of 115 to 140° F (46 to 60°C)
- Is highly effective in hard and soft water conditions and the broad range of temperatures typically found in on-premise laundries
- Is ideal for professional shirt launderers, linen supply, hospitality, hospital laundry, and nursing home applications
- Provides effective deodorization
- Allows for minimal use of alkalinity {contains no caustic}
- Is readily soluble in all concentrations
- Is phosphate free
- Is stable in storage conditions

OVATION Use Instructions

For professional laundry use only. Before using any chemical product, review the Safety Data Sheet (SDS) for safe handling and proper disposal.

Laundry Use

Follow garment care label and garment fiber content and construction to select appropriate washing and drying settings and finishing methods. Safe on all washable, colorfast fabrics including polyester and other synthetic blends. **DO NOT use on natural silk or wool.** Safe on all metals and rubbers found in laundry equipment. If colorfastness is questionable, test garment in a hidden area.

For commercial shirt loads:

Add OVATION to the break/bleach operation at the rate of 8 oz.–12 oz. / 50 lbs. (240 mL – 360 mL/23 kg) machine capacity.

For institutional healthcare and hospitality linen:

Use in break / bleach operation at the rate 4 oz.–8 oz. /50 lbs. (120 mL – 240 mL/23 kg) machine capacity. Increased rates may be used based on degree soiling.

For heavy soil (restaurant linen and similar):

Use in double break /bleach or break /bleach /suds formula at the rate of 12 oz. –16 oz. /50 lbs. (360 mL–480 mL/ 23 kg) machine capacity. Increased rates may be used based on degree soiling.

Typical laundry operations should incorporate a sour, such as **Nullify** or **Liquid Sour**, to reduce the pH in the final rinse, but use of a sour may or may not be necessary depending on the local rinse water bicarbonate alkalinity levels.

Typical of high concentration oxygen bleach products, OVATION may “ball up”, or harden in high humidity conditions without adverse effect. Keep product covered with lid when not in use and/or whenever possible.

How to Order OVATION

Order from your authorized Adco –Laidlaw local distributor in 50-pound pails and 100-pound drums.
