

# PURO™

## VOLATILE DRY-SIDE STAIN REMOVER

### NEW FORMULA Contains no Trichloroethylene.

**Compliant with US EPA Final Risk Management Rules for Trichloroethylene Under the Toxic Substances Control Act (TSCA)**

“Dry-side” spotting is done without the use of moisture. It’s a technique employed when water or steam, or wet-side spotting agents might disturb the fabric’s dye or spread the dye contained in stains like cosmetics.

**PURO**, used along with other dry-side agents, is indispensable for working difficult dry-side stains. Applied as the first step, **PURO** dissolves and flushes soluble stain components from fabric to prevent them from spreading. Then, after applying the appropriate dry-side agent and working the stain, **PURO** is used to flush the loosened stain from the fabric before drycleaning. This helps prevent the possibility of working loosened soils back into the fabric. Once the stain is gone, a final flushing with **PURO** will remove the spotting agents to prevent bleeding of fabric dye, ring formation, or transfer of dye to other garments.

When used for touch up spotting, **PURO**’s controlled evaporation makes it easy to remove pick-up soil without leaving a ring, saving the time it would take to reclean the garment.

#### • **Speeds Stain Removal**

**PURO** speeds up the effect of an oily-type dry spotter because it dissolves the solvent-soluble components found in many dry-side stains.

#### • **Flushes Dry-Side Spotting Chemicals**

Ring formation, and even damage to dyes, can occur if some spotting agents are left on fabric too long after spotting.

**PURO**’s solvent action removes these residual spotting agents so you won’t have to face the work of removing difficult rings after drycleaning.

#### • **Safe Yet Effective**

**PURO** flushes solvent-soluble dye from stains safely before it can spread, making it easier to completely remove the stain.

#### • **Ideal for Touch up Spotting**

Garments can pick up soil like finger marks and grease after drycleaning. **PURO** is completely volatile and has a controlled rate of evaporation so it evaporates completely and rapidly, facilitating dry-side feathering. This makes **PURO** effective for touch-up spotting at spotting boards, presses, and at inspection stations. It saves you time and money by eliminating recleans.

# PURO Use Instructions

**For professional drycleaning, wetcleaning & laundry use only. Read Safety Data Sheet for further instructions, warnings, and first aid information before using this product. If colorfastness is questionable, test fabric in a hidden area.**

## Dry-Side Spotting:

- Place a towel or cheesecloth under the stain, flush the stained area with **PURO** while vacuuming the staining material into the towel or cheesecloth.
- Continue this process until stain is removed or no additional dye can be removed.
- **Dry thoroughly** with air gun and the vacuum area of the spotting board.
- Dryclean promptly. If traces of stain remain, apply **APOG™** or **PYRATEX®** oily-type dry spotter and continue working the stain. **Do not flush with water or steam.**
- Rinse with **PURO**, while drawing vacuum, until the stain is gone.
- **Dry thoroughly** with the air gun and the vacuum area of the spotting board.
- Dryclean promptly.

## Touch-Up Spotting:

- To remove pick-up soil, finger marks, smudges, oil, and grease from fabrics when re-cleaning is to be avoided: Apply **PURO** to cheesecloth or tip of clean, dry spotting brush.
- Remove the stain by rubbing lightly with cheesecloth or tamping with spotting brush.
- Feather the area with cheesecloth dampened with **PURO**, spreading and thinning the edge of the dampened area to avoid the formation of a ring.
- **Dry thoroughly** with air gun and the vacuum area of the spotting board.

## How to Order PURO

Order from your authorized Adco -Laidlaw local distributor in 1-gallon (3.78 L) containers, and boxes of four 1-gallon (3.78 L) containers.
